FARM SYSTEM REVIEW

Why do a Farm System Review?

Do you want any of the following?

- To find opportunities to significantly lift your farm profitability
- To uncover opportunities which are not obvious and usually missed without special analysis
- To understand the relative profitability of each enterprise currently on your farm
- To be able to investigate and analyse any alternative sheep, cattle or deer system – how would it fit into your farm and what impact would it have on profit and feed?
- To investigate significantly different sheep:cattle ratios such as the inclusion of new beef cow options that produce similar profitability to high performing sheep.
- To find the best options to make your farm more resilient to seasonal climate variations and maybe less dependent on the store market.
- To investigate the best returning options from a development investment eg. Hill country pasture improvement, water storage and small scale strategic irrigation etc.
- To review and determine whether genetics are a significant factor limiting your results.

If your answer was yes to some of the above then an AbacusBio Farm System Review is the place to start
