

FARMAX has a range of products to suit dairy farmers' monitoring and analysis needs.

FARMAX FEED WEDGE

FARMAX Feed Wedge is one of the most advanced feed wedges available. It gives you an in-depth view of your current and future feed wedges to identify surpluses or deficits. You can test different scenarios to see the effect that changing crops, nitrogen, rotation length and more have on your feed wedge. Feed Wedge integrates with FarmTools Dairy and Professional Dairy, listed below.

FARMTOOLS DAIRY

FarmTools Dairy is focused on capturing information. It uses all the data you enter – such as pasture covers, milk production and stock numbers – to create an improved forecast of your farm performance and then compares this forecast against your original plan. FarmTools Dairy incorporates FARMAX Feed Wedge and can be upgraded to Professional Dairy.

PROFESSIONAL DAIRY

FARMAX Professional Dairy provides the full package, giving you the ability to compare farms and scenarios for financial and physical feasibility. This software enables you to undertake tactical and strategic modelling and in-depth analysis.

DAIRY FARM PLANNING TOOLS

FARMAX farm planning tools were developed in 1993, when a group of scientists at AgResearch came together to build a computerised model of a New Zealand farm system.

Ten years later, FARMAX the company was born – an industry-good organisation providing farmers with the tools necessary to accurately monitor their farms, analyse the current situation and plan ahead.

Today, FARMAX has the tools to help you, whether you are after an introductory level forecasting product or an advanced farm system scenario tool.

FARMAX provides a distinct advantage. FARMAX customers consistently perform above the New Zealand average.

Give yourself or your clients the same advantage by using FARMAX farm planning tools.

Check out some of the features of our three farm planning tools for dairy farms.

FARMAX FEED WEDGE

- Enter paddock covers
- Current feed wedge
- Forecast feed wedge
- Paddock allocation
- Plan rotation, pasture and supplementary feeding, post graze residuals and numbers
- Apply nitrogen
- Remove paddocks for conservation and crops

FARMAX FARMTOOLS DAIRY

- Enter paddock covers
- Current feed wedge
- Forecast feed wedge
- Paddock allocation
- Plan rotation, pasture and supplementary feeding, post graze residuals and numbers
- Apply nitrogen
- Remove paddocks for conservation and crops
- Forecast cover long-term
- Predict condition score
- Predict response to supplements
- Predict profitability
- Predict milk solids production
- Monthly monitoring service
- Compare with original plan

FARMAX PRO DAIRY

- Enter paddock covers
- Current feed wedge
- Forecast feed wedge
- Paddock allocation
- Plan rotation, pasture and supplementary feeding, post graze residuals and numbers
- Apply nitrogen
- Remove paddocks for conservation and crops
- Forecast cover long-term
- Predict condition score
- Predict response to supplements
- Predict profitability
- Predict milk solids production
- Monthly monitoring service
- Compare with original plan
- Develop and compare multiple scenarios
- Performance screen
- Tactical and strategic monitoring
- Detailed mating setup
- Access to more reports and databases
- More control over background settings
