

## Entering Calving Information

As calving progresses, it is important to record the actual calving pattern and calf tally.

This is done in **Tools** in the **Calving numbers** and **Calf tally** screens.

Before calving, all numbers in both screens should be in grey or black text colour. As you override these values with actuals they turn Blue.

You can enter these in 10-Daily, Weekly and Daily periods by clicking on the buttons as above, then follow the steps below:

1. Enter the number of cows that have calved in the Calving Numbers screen for the chosen period – ‘Calved’ row.
2. Then click on Calf Tally and enter the number of cows that had twins
3. Enter the number of bobby calves
4. Enter the number of heifer calves – Farmax will assume that the remainder died.

		11-20 Jul	21-31 Jul	1-10 Aug
Cows Calved	Single		50	282
	Twin			
	Total		50	282
Bobby Calves	Born		62	141
	Total Born		62	203
Heifer Calves	Born		25	141
	Total Born		25	166
Calf Deaths	Dead		-37	
	Total Dead		-37	-37
Total	Born		50	282
	Total Born		50	332

### Negative deaths?

If you see a red negative value in the deaths row, the number of calves born must be exceeding the number of cows calved. Either return to the Calving numbers screen and check the number is correct here or edit the number of cows that had twins.

### Bobby calf sales

Bobby calves are sold automatically four days after birth. If you would like to be more precise with bobby calf sales, you can create a Mixed Calf or Bull calf mob which will remove this automatic sales feature and allow you to sell as normal.
